WEIGHTS & DIMENSIONS

SEMITRAILER

The ruslan® represent robustness across the board. Reliable, easy maintenance mechanic and hydraulic systems for extreme road and climatic conditions are a key factors in this industry.

- ◆ Very simple operation when loading and unloading and easy handling based on the reliable Kässbohrer lifting system
- ◆ The semitrailer offers an excellent loading factor and all flexibility to optimize the loads
- ◆ Reliable and very robust car carrier
- ◆ User-friendly and low-maintenance spindle lifting gears
- ◆ Especially flexible for extreme road conditions

Net weight:
11,600 – 13,000 kg

Gross weight:
28,000 kg

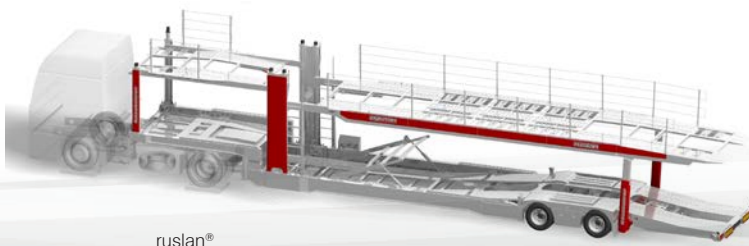

King pin plate from ground when loaded:
~ 1,100 mm

Vehicle length:
17,100 mm

Vehicle width:
2,550 mm

Clearance width between the rear lifting devices:
2,274 mm hinten

Type:

ruslan®

Configuration of the *ruslan*® semitrailer superstructure

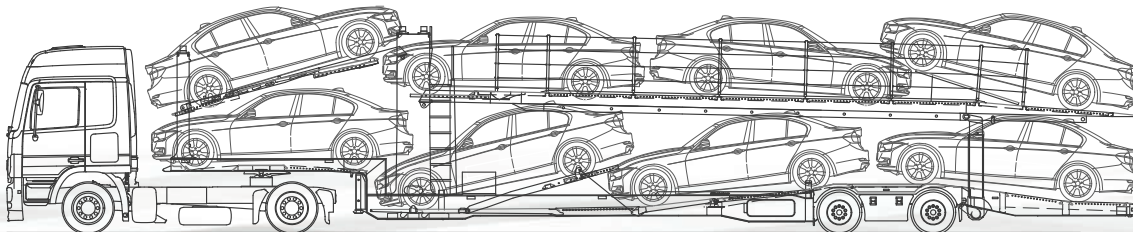

Standard equipment:

- High quality steel girders in light weight construction
- Drive-on ramps constructed from anti-slip perforated sheet metal, chassis, lifting spindles, lifting platform, upper platform and lower platform are hot-dip galvanized
- Front and central lifting mechanism inside supporting pillars with spindle lifting gears
- Protected against spraying water from the road by metal sheets
- Electric system completely according to European Union standards ECE-R 48
- Hydraulic piping chromated, coated bolt joints und hot-dip galvanized components
- Air suspension with BPW tandem axles and twin tyres (load capacity 11 tons per axle)

Optional equipment:

- One pair of aluminium kick-up ramps with height adjustment and free positioning (1,900 mm long, 530 mm wide)
- extra wheel chocks

For more details and additional equipment options please refer to the respective data sheets. The illustrations are used as examples and might show vehicles with optional equipment. We reserve the right to make changes due to errors or based on technical progress.

Loading example ruslan® with 4,00 m height.

Driven by professionals®

Your decision gives you the security to own and use a vehicle produced by a company who is famous in the market for the quality and the durability of its products.

Kässbohrer transporter superstructures are compatible with chassis of all leading truck manufacturers. The design of our car carriers gives you the possibility to combine trucks and trailers from different models and to adjust them to fit your individual needs.

All the standard spare parts are available in our service center and at our contractual partners. You can also check our online catalogue for more detailed information and for a trouble-free ordering process.

Repairs are carried out quickly and reliably at our headquarters workshop in Eugendorf (Austria) and the authorized workshops along major European transport routes.
