WEIGHTS & DIMENSIONS

TRUCK SUPERSTRUCTURE

The citytrans® pro vehicle transporter has been especially designed for deliveries in urban areas. Roundabouts, narrow streets and limited loading and unloading spaces won't be an issue for the agile citytrans® pro.

- ◆ Easy operating control allows rapid loading and unloading
- ◆ The optimized one hand lever lifting system supports a fast and easy loading
- ◆ Ergonomic layout of the hydraulic controls with a perfect view of the moving platform components
- ◆ Pillar groups and wheel housings designed for maximum load height
- ◆ Optimized mounting space for original fuel tanks or for the well proven Kässbohrer fuel reservoir solutions
- ◆ Perfect for distribution in congested areas and flexible to maneuver in urban traffic

Net weight of the superstructure:
min. 5,050 – max. 5,200 kg

Wheel base:
5,400 – 5,600 mm

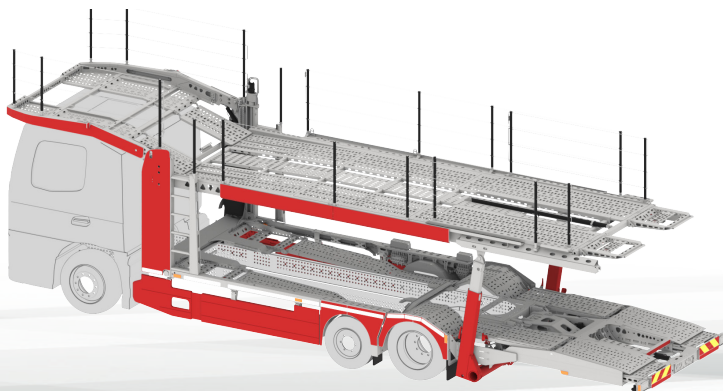

Overall vehicle length:
10,200 – 12,300 mm

Overall vehicle width:
2,550 mm

Entry height:
2,000 mm

Platforms passage width:
2,400 mm upper platform
2,330 mm lower platform

Type:

citytrans® pro

Configuration of the *citytrans*® *pro* truck superstructure

Driven by professionals®

Your decision gives you the security to own and use a vehicle produced by a company who is famous in the market for the quality and the durability of its products.

Kässbohrer transporter superstructures are compatible with chassis of all leading truck manufacturers. The design of our car carriers gives you the possibility to combine trucks and trailers from different models and to adjust them to fit your individual needs.

All the standard spare parts are available in our service center and at our contractual partners. You can also check our online catalogue for more detailed information and for a trouble-free ordering process.

Repairs are carried out quickly and reliably at our headquarters workshop in Eugendorf (Austria) and the authorized workshops along major European transport routes.
